

## **Canadian Gold Hunter Commences Drill Program at Manson Creek Gold Project**

VANCOUVER, BRITISH COLUMBIA--(CCNMatthews - Oct. 11, 2005) - Canadian Gold Hunter Corp. (the "Company") (TSX:CGH) is pleased to announce that the fall drill program has commenced on its Manson Creek gold project in central British Columbia. A total of 1,600 metres of drilling is planned in eight holes.

The holes are designed to follow up very encouraging results from the Company's 2004 program that included a bonanza grade intercept in drill hole 04-002, which intersected 1.5 metres grading 173 g/t gold (please see news release dated November 17, 2004). Additional encouraging results include 141 metres grading 0.78 g/t gold in hole 04-003 and 70 metres grading 0.69 g/t gold in hole 04-005.

The Manson Creek property is underlain by a broad soil and rock gold geochemical anomaly and partly coincident IP chargeability anomaly. These anomalies occur within strongly pyritic, carbonate-altered and quartz-veined greywackes, which crop out over a large area.

The Manson Creek Property is located in one of British Columbia's oldest placer gold camps, the source of which could be the Company's Property. The Company has a 100% working interest in the Property.

Drill core was prepared and analyzed by ALS Chemex in accordance with industry standards. Drill results and technical data were reviewed by J. E. Christoffersen, P. Eng., a Qualified Person pursuant to NI 43-101. Intervals listed above are for core lengths assayed. True thicknesses are not accurately known at this time; in some cases they may be less than the core lengths reported.

This News Release contains forward looking statements which are subject to a variety of risks and uncertainties which could cause actual events or results to differ materially from those reflected in the forward looking statements. The Company does not intend to update this information and disclaims any legal liability to the contrary.

ON BEHALF OF THE BOARD

Richard J. Bailes, President
